

PROPOSAL

Event Website & Registration Platform Development

A full-stack conference website with delegate/exhibitor registration, payments, ticketing, and a no-code admin panel

1. Overview

This proposal outlines a complete website and backend platform for the event, covering everything attendees, exhibitors, and organizers need — from public-facing pages through to registration, payments, ticketing, and day-of check-in. The platform is scoped as 13 core pages (with 5 optional additions) on the frontend, and a full admin and registration backend that lets the organizing team manage content, registrations, and finances without ongoing developer involvement.

The goal is a system the organizer can run independently after handover: adding speakers, updating the schedule, issuing coupon codes, exporting delegate lists, and checking attendees in on-site — all through a single admin panel, with role-based access so the right people see only what they need.

2. Frontend — Website Pages

2.1 Core Pages (13)

These form the complete public-facing website and are included in the base scope.

Page	Purpose
Home / Landing	Primary entry point — event highlights, countdown, key CTAs (Register, Explore Agenda).
About	Event overview and organizer background.
Speakers	Speaker directory with photos, bios, designations, and social links.
Schedule / Agenda	Day-wise event agenda.
Delegate Registration	Multi-step registration form with dynamic pricing tiers.
Exhibitor Registration	Separate registration flow and lead capture for exhibitors.
Venue / How to Reach	Location, directions, and map.
Accommodation	Stay options with booking details.
Gallery	Combined image and video showcase from past/current editions.
Contact Us	Contact form and organizer details.

Page	Purpose
Payment Success / Ticket Confirmation	Post-payment confirmation with ticket/QR details.
Terms, Privacy & Refund	Single content template served across three routes.
Blog / Articles	Content hub for announcements and articles.

2.2 Optional Pages (5)

Recommended as scope extensions, priced and scheduled separately if selected.

Page	Purpose
Sponsors / Partners	Sponsor showcase by tier.
Call for Abstracts / Paper Submission	Academic submission workflow.
Press & Media	Media kit and press coverage.
FAQ	Common questions for attendees and exhibitors.
Archive (Past Editions)	Historical record of previous editions — recommended for Year 2 onward.

Note: Archive (Past Editions) is best deferred to Year 2, once there is a first edition to archive.

3. Backend — Platform Features

Beyond the public pages, the platform includes the operational systems that make registrations, payments, and event-day logistics run smoothly.

Feature	Description
Admin Panel	Centralized CRUD for speakers, schedule, sponsors, and gallery.
Registration Engine	Delegate registration with dynamic, tier-based pricing.
Coupon Engine	Discount code creation with usage limits and expiry.
Payment Gateway Integration	Webhook-based confirmation for reliable payment status (not redirect-dependent).
Ticketing	Unique ticket ID generation with QR code issuance.
Role-Based Admin Access	Super Admin, Registration Desk, and Finance roles.
Registration Status Dashboard	Live view of pending / paid / failed / refunded registrations.
Exhibitor Lead Management	Independent data flow and table separate from delegate records.
On-Site Check-In System	QR scanner web app for fast, contactless entry — a standout addition to the standard scope.
Accommodation Booking	Room allocation tracking tied to bookings.
Export Tools	One-click Excel/CSV export of delegate and exhibitor lists.
CMS-Lite	No-code content management for speakers, gallery, and blog.
Abstract/Paper Submission	Submission and review workflow for the academic track (if applicable).
Analytics Dashboard	Daily registrations, revenue, and tier-wise breakdown.

The on-site QR check-in system is highlighted separately as a high-value addition — most comparable event platforms stop at ticket generation and leave check-in as a manual process; building it in removes that gap entirely.

4. Admin Panel — What the Organizer Can Do

The admin panel is built so the organizing team can manage the entire site and registration process without touching code, split into role-appropriate areas.

People & Brand Management

- Add, edit, and remove speakers — name, photo, bio, designation, social links, featured toggle, drag-to-reorder display sequence
- Add, edit, and remove sponsors/exhibitors — logo, tier (Platinum/Gold/Silver), website link, booth number, category tag
- Add and remove team members (About Us page)
- Bulk soft-delete/archive so content is never lost by accident

Content Editing (No-Code)

- Editable page titles and meta titles/descriptions per page for SEO
- WYSIWYG rich-text editor for About, Terms, Refund, and Privacy pages
- Homepage banner/hero image, headline, and subtext — editable without code
- Single countdown date field that updates every countdown widget site-wide

Gallery

- Bulk image upload (drag multiple files)
- Video embed via YouTube/Vimeo link — no file hosting needed
- Album/category grouping (Day 1, Day 2, Workshops, etc.)

Registrations & Finance

- Searchable, filterable registration table (name, tier, payment status, state, college)
- Manual status override for offline/bank-transfer payments
- One-click Excel export
- Refund flag with notes field
- Coupon code creator — code, discount type, usage limit, expiry — all form-based
- Live dashboard: total registrations, revenue, tier-wise breakdown, daily trend graph

User & Access Control

- Role-based logins: Super Admin, Content Editor, Finance, Check-in Staff
- Activity log — who changed what, when — for audit visibility
- Self-service password reset without developer involvement

Site Settings

- Contact details and social links editable from one settings page
- Logo upload for header and footer
- Google Analytics / Meta Pixel ID fields
- Maintenance mode toggle

Blog Management

- Post editor with auto-generated, editable slug
- Rich-text/WYSIWYG editor with embedded images and YouTube
- Featured image upload with alt text (SEO)
- Category and tags, multi-select, admin-created on the fly
- Author dropdown pulled from the Team/Speakers table
- Per-post meta title and meta description
- Draft / Scheduled / Published status with future auto-publish
- Preview before publishing

5. Roles & Access

Access is segmented by function so each team member only sees what's relevant to their role:

1. Super Admin — full access to every module, including user and role management.
2. Content Editor — pages, gallery, speakers, and blog only.
3. Finance — registrations, payment status, refunds, and exports only.
4. Check-in Staff — QR scanner app only, no access to other admin modules.

6. Technology Approach

The platform will be built on a modern, maintainable stack suited to the scope above — a CMS-lite admin layer over a relational database, webhook-verified payment integration (rather than redirect-only confirmation, which is more prone to silently lost payments), and a lightweight browser-based QR scanner for check-in that needs no dedicated hardware or app install.

7. Assumptions & Next Steps

- Final page count, optional-page selection, and payment gateway choice to be confirmed with the organizer before development begins.
- Content (speaker bios, sponsor logos, past-edition gallery assets) to be supplied by the organizer, or drafted as a separate content-support add-on.
- Timeline and cost will be shared as a separate quotation once scope (core-only vs. core + optional pages) is confirmed.
- A staging link will be shared for review at each major milestone before moving to the next phase.
